			ART UNIT 3626	PAPER NUMBER
			MAIL DATE 12/22/2009	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/650,497

Applicant(s)

BLOWERS ET AL.

Examiner

REGINALD REYES

Art Unit

3626

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 October 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 3-11, 13-22, 24-29, 31-36 and 38-43 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3-11, 13-22, 24-29, 31-36, 38-43 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Status of Claims

1. Claims 1, 3-11, 13-22, 24-29, 31-36, 38-43 have been examined and are addressed below. Claims 2, 12, 23, 30, 37 and 44 have been cancelled.

Response to Amendments

2. With respect to Claim 24, the rejection of this claim is addressed bellow.
3. With respect to claims 1-3-7, 17-22, 25-29, 31 and 32, Applicant's amendment and arguments are addressed in the rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 3, 4, 7, 8, 9, 10, 11, 13, 16-19, 22, 24-25, 28-29, 31, 32, 33, 34, 35, 36, 38, 39-41 and 43 are rejected under 35 U.S.C. 103(a) as being obvious by Rueter U.S. Patent Number 5,944,745 in view of Hatlestad et al (U.S. 2004/0122294) and Duffin et al (U.S. Patent Number 6,292,698).
5. With respect to claims 1, 8, 17, 29, 33 and 39 Rueter teaches a method comprising: one or more remote monitors, wherein the one or more remote monitor obtain the events from interrogation of a medical device implanted within a patient, and

with the prioritization engine, the received events and presenting, with a user interface device, a list of the events based on the prioritization (see for example 1 lines 44-48 and lines 65-67 and column 2 lines 1-9 and column 2 lines 10-25 and column 3 lines 33-36). Reuter does not teach wherein the events include therapy events and diagnostic events nor does it teach receiving the events from a remote monitor. Hatlestad teaches the prioritizing engine to be external (see for example Hatlestad paragraph 87-88, 92-93 and 176-181 and Figs 10, 27-28). Hatlestad teaches data that includes therapy and diagnostic data (see for example Hatlestad paragraph 41). Hatlestad further teaches a remote monitor that can access the PDA/prioritization engine (see for example Fig. 7 and paragraphs 87-88). Rueter in view of Hatlestad does not teach prioritizing events obtained from a plurality of medical devices implanted in different patients; and presenting a list of the patients and a list of the events for each of the patients based on the prioritization. Duffin teaches, a management system for monitoring implanted medical devices that provides data collection to one central site from all study patients (see for example Duffin column 14 lines 25-29). One of ordinary skill in the art at the time of invention would have found it obvious to combine the prioritizing method taught by Reuter with the features of Hatlestad to and the telemetry system for implantable medical devices taught by Duffin to prevent the implanted device from being overworked.

6. With respect to claims 3, 9, 11, 22, 24, 31, 34, 36 and 43 Rueter in view of Hatlestad and Duffin teaches the method of claim 1 (as described above). Rueter

teaches wherein prioritizing events includes prioritizing the events based on a relative importance associated with the events (see for example Rueter column 1 lines 65-67 and column 2 lines 1-9).

7. With respect to claims 4, 13, 25, 32 and 38 Rueter in view of Hatlestad and Duffin teaches the method of claim 1 (as described above). Rueter teaches further comprising invoking a special action in response to an event with a relative importance that exceeds a threshold (see for example Rueter column 7 lines 66-67 and column 8 lines 1-4).

8. With respect to claim 7, 16 and 28 Rueter in view of Hatlestad and Duffin teaches the method of claim 4 (as described above). Duffin teaches wherein the special action includes generating an alarm, notifying a clinician, and notifying a patient (see for example Duffin column 3 lines 13-19 and column 14 lines 3-15). It would have been obvious to one of ordinary skill in the art at the time of application to combine both features to better monitor patients and their implanted medical devices.

9. With respect to claims 10 and 35 Reuter in view of Hatlestad and Duffin teaches the method of claim 8. Hatlestad teaches further comprising assigning the relative importance based on a set of rules (see for example Hatlestad paragraph 176). One of ordinary skill in the art at the time of invention would have found it obvious to combine

the prioritizing method taught by Reuter with the features of Hatlestad with the same reason mentioned above.

10. With respect to claims 18 and 40, Rueter in view of Hatlestad and Duffin teaches the system of claim 17 (as described above). Duffin teaches further comprising a data management application that parses raw data from the implantable medical device, and populates fields of a database with event data (see for example Duffin column 13 lines 65-67 and column 14 1-3). It would have been obvious to one of ordinary skill in the art at the time of application to combine both features to get an updated data.

11. With respect to claims 19 and 41 Rueter in view of Hatlestad and Duffin teaches the system of claim 18 (as described above). Duffin teaches wherein the event data comprises one of patient name, device type, date event data was parsed, and event type (see for example Duffin column 14 lines 45-54). It would have been obvious to one of ordinary skill in the art at the time of application to combine both features to gather effective data.

12. Claims 5, 6, 14, 15, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rueter U.S. Patent Number 5,944,745 in view of Hatlestad et al (U.S. 2004/0122294) and Duffin et al (U.S. Patent Number 6,292,698) and Hwang U.S. Patent Number 5,920,271.

13. With respect to claims 5, 14 and 26 Rueter in view of Hatlestad and Duffin teaches the method of claim 4 (as described above). Rueter in view of Hatlestad does not teach wherein the special action comprises using a conspicuous text format when presenting data from the event. Hwang teaches wherein the special action comprises using a conspicuous text format when presenting data from the event (see for example Hwang column 5 lines 58-67). It would have been obvious to one of ordinary skill to combine both features to alert the user the importance of certain messages are.

14. With respect to claims 6, 15, and 27 Rueter in view of Hatlestad, Duffin and Hwang teaches the method of claim 5 (as described above). Hwang teaches wherein the conspicuous text format includes one of font, bold text, highlighted text, underlined text, and italicized text (see for example Hwang column 5 lines 58-67). It would have been obvious to one of ordinary skill to combine both features to alert the user the importance of certain messages are.

15. Claims 20, 21 and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rueter U.S. Patent Number 5,944,745 in view of Hatlestad et al (U.S. 2004/0122294) and Duffin et al (U.S. Patent Number 6,292,698) and Webb et al U.S. Patent Number 7,060,031.

16. With respect to claim 20 Rueter in view of Hatlestad and Duffin teaches the system of claim 17 (as described above). Rueter in view of Hatlestad does not further comprising a database to store the prioritized events, wherein the user interface device

includes a web browser to access the prioritized events via a network connection.

Webb teaches further comprising a database to store the prioritized events, wherein the user interface device includes a web browser to access the prioritized events via a network connection (see for example Webb column 13 lines 66-67 and column 14 lines 1-2 and Fig 4). It would have been obvious to one of ordinary skill in the art to combine the features to have better accessibility to the database.

17. With respect to claim 21 Rueter in view of Hatlestad, Duffin and Webb teaches the system of claim 20 (as described above). Webb teaches further comprising a derivation engine to generate additional events based on the stored events (see for example Webb column 17 lines 63-67 and column 18 lines 1-15 and Fig 7A).

18. With respect to claim 42 Rueter in view of Hatlestad, Duffin and Webb teaches the system of claim 39 (as described above). Webb teaches further comprising a derivation engine to generate additional events based on the stored events (see for example Webb column 17 lines 63-67 and column 18 lines 1-15 and Fig 7A). Therefore it would have been obvious to one of ordinary skill in the art to combine both arts to better service the clients.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 6,083,248 teaches world wide patient location and data telemetry system for implantable medical devices.

U.S. Patent No. 6,2374,973 teaches implantable medical device for sensing absolute blood pressure and barometric pressure.

U.S. Pub. No. 2003/0204147 teaches method and apparatus for injection of external data within an implantable medical device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to REGINALD REYES whose telephone number is (571)270-5212. The examiner can normally be reached on 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Gilligan can be reached on 571-272-6670. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
